Crowd Sourced Indexing: Ready to Index?

NYC Marriage Index, Brooklyn, 1930

Description: From Reclaim the Records, the NYC Marriage Index was shared to the world on the Internet Archive. Unlike the marriage certificate index that has been available for years, this index is for the Application, Affidavit, and License record group. These records include the addresses of the witnesses, the towns of birth for bride and groom, countries of birth of the parents, former spouses and divorce information, and the bride's occupation. Sometimes a license was filled out but no marriage took place as well, so that would provide even more information about the lives of our ancestors.

Some of these pages have nearly 100 records on them. Be aware that you must complete all of the names so allow yourself time for indexing. Partial indexing is not an option.

Surnames are printed making the indexing much easier. Given names are in cursive.

Project Instructions: Fill in "Groom" or "Bride" for gender. Grooms are on the left side page, brides are on the right. If there is a middle initial, or multiple given names, fill them all into the Given Name field. List the months as they are shown, or alternatively with the more modern abbreviation for the month. Use the Remarks column for anything unusual: Some listings show duplicate numbers in the Vol/Page columns, some listings show 1929 with the certificate number. If you find a listing with a different year beyond the one listed in the certificate column, also place that in Remarks.

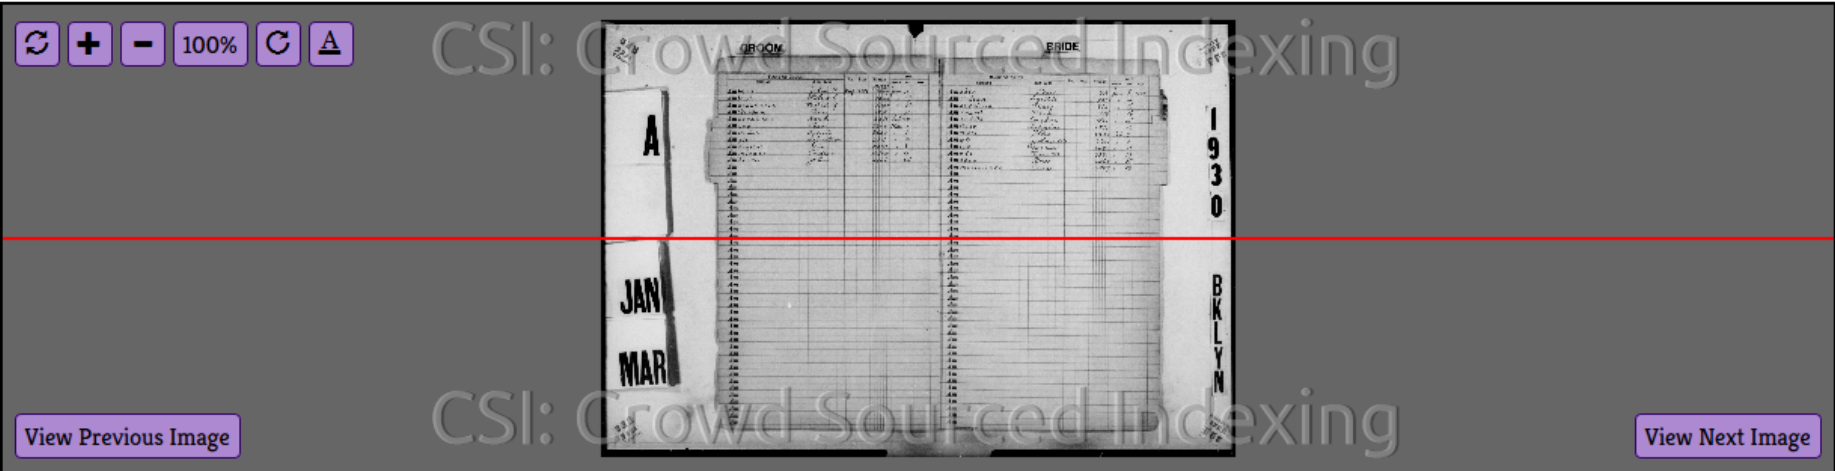

Progress:

1%

- CSI Instructions:**
- You will be shown one image to index. Please fill in all of the appropriate fields and completely as possible.
 - You may view one image before and one image after (if they exist) for the purposes of better indexing, but do not index those images. If a record exists across two pages, you should index records that begin on the page you were given. You should only make an exception if you believe that another indexer may not have noticed that the record begun on their page continued on yours.
 - When complete, use the Submit Transcriptions button at the top of the page to save your work

Create New Project

CSI Admin: Create A New Project

Instructions

Step one must be completed first. Use the button below the instructions to begin setting up a new project. Continue through the steps of setup using the links below the instructions.

1. ADD PROJECT DATA

Be prepared to provide a Project Name, a Short Name for the project, a Description, some Instructions, up to three Languages, and average number of Records Per Image. Records Per Image is the number of lines that will be presented to the indexers for each image; they can add as many more as are needed. Much of this information can be edited later.

2. FIELDS FOR INDEXING

Provide the fields that you will request be filled out by indexers. Each field type can only be used once. If you need a field that is not listed, do not submit the fields; request the field be added first. There is no mechanism to edit this information later.

3. IMAGE FILES SETUP

Tell CSI where the files are that you want indexed. Allowed file types are JPG, PNG, and GIF. Currently, only files hosted on CSI's server can be submitted through the program. Contact the [System Administrator](#) to arrange for uploading of your files. Be sure that all of the files included are of a similar type because they will all be indexed together and using the same fields. It is best to submit only images that are correctly upright as the rotation mechanism in the indexing viewer is quirky. There is currently no mechanism to edit this information later, but it may be added in a future upgrade.

4. SAMPLE IMAGES SETUP

Choose up to two sample images that indexers can view before participating in your project. You may choose images hosted by CSI or not. These are not required and are not required to begin the project. Once the file setup is complete, you can view the list of files to be indexed and choose from those for the samples.

5. MARK PROJECT LIVE TO BEGIN INDEXING

CSI Admin: Create A New Project - Data

Project Name*:

Provide a descriptive title for the project.

Short Name*:

Provide a shorter version of the project title for use in limited spaces. This may be the same as the regular name if it's not very long. The maximum length is 40 characters.

Group*:

Allow this project to be available to all indexers, not just those in your group.

Project Language:

Choose the language that the project information (description, instructions, etc.) are written in.

Project Description:

Use complete sentences. This may be truncated according to where you put periods where a shorter version is used.

Project Instructions:

CSI Admin: Create A New Project - Fields

Fields to be Indexed

Instructions

- Choose the data you want indexed on this project.
- You may request indexing of the parts of the date separately or all in one field. Use "Day" for the parts and "Date" for the full date. Remember that searching later is more difficult with a single field, and indexers may not follow the date format you want.
- If you need additional field types contact the [System Administrator](#) before proceeding.
- The image filename and sequential line numbers for each image will be automatically recorded by CSI.
- You will have the option to change the order of the fields to facilitate indexing in the next step.
- You may choose a pre-selected set of fields from the list below to get started. Any menu selection will clear any fields you have already chosen.

CSI Admin: Create A New Project - Fields

Fields to be Indexed

Instructions

- Fill in numbers in the boxes to choose the order the fields should appear to the indexers.
- Type 0 (zero) for the number if you change your mind and don't want it indexed.
- Use the Back button of your browser and submit the form again if you want to add more fields.

CSI Admin: Create A New Project - Files

Files to be Indexed

Location of Project Files, if hosted locally

Provide the URL of the files on the CSI server.

[Submit Project Files](#)

Location of Remote Files

You may provide the root URL to the files here and simply list the filenames below, or leave this blank and provide complete URLs below. You must include the http:// part.

List of Project Files

You may list one per line, or provide the filenames separated by a comma or a semicolon. Be sure that no filenames contain commas or semicolons.

All filenames should be unique.

Files are copied to the CSI server to be presented to the indexers in the order they are listed.

If you have more than 50 files, it is recommended you contact the [System Administrator](#) to arrange for uploading rather than using this method as the script may time out before it is finished.
